

AMENDMENTS TO THE ABSTRACT

Replace the Abstract with:

A display system includes respective light sources disposed at two ~~different~~ opposed light input ends of a light guiding plate; ~~a.~~ A double-sided prism sheet is disposed on a light-emitting side of the light guiding plate; ~~and having~~ includes, on a first surface facing the light guiding plate, a triangular prism bank extending in a direction parallel to the light input ends of the light guiding plate; ~~and.~~ The double-sided prism sheet includes, on a second surface, opposite to the first surface, a cylindrical lens bank extending in a direction parallel to the triangular prism bank; ~~a.~~ A transmissive display panel is disposed on a light-emitting side of the double-sided prism sheet; ~~and a.~~ A synchronization driving section ~~causing~~ alternatively illuminates the respective light sources so the transmissive display panel to display displays two different images ~~in synchronization with the light sources, wherein.~~ The light from the light sources is emitted through the transmissive display panel at respective divergent angles producing two images corresponding to right and left parallax images, producing a stereoscopic display.
